

# Valerus QuickSet Skid

## INNOVATION DRIVEN BY CUSTOMER NEEDS

When our customers expressed a need for a quick, effective means of hookup and fuel conditioning, the Valerus team immediately applied its vast manufacturing and field expertise to design and fabricate a portable, customizable device that answered that need.

The result: the Valerus QuickSet Skid. And it is indeed providing our customers a reliable solution for a variety of processing applications on compressor locations. Specifically, the QuickSet Skid offers inlet separation, compressor auto recycle, discharge coalescing with filtering, fuel and instrumentation scrubbing, and gas metering instrumentation – all on a common skid.

## FEATURES DESIGNED FOR MAXIMUM BENEFIT

The QuickSet Skid affords numerous benefits over the standard equipment configuration. These include:

### Rapid Deployment:

Tailored to the customer's lease needs, the QuickSet Skid equipment configuration is pre-piped, skid-mounted and assembled in the shop for expedited delivery and installation. The portability of the QuickSet Skid also allows operators to efficiently and economically react to the changing requirements of their lease.

### Reduced Installation Cost and Time:

The QuickSet Skid is designed to expedite installation. It is fabricated as the central piping point for all incoming and exiting piping, and includes all necessary valves. There are inlet and outlet connections for Amine treating and gas dehydrations, with a by-pass valve in the event these services are not required. The end result for the operator is that the time and cost associated with facility installation are reduced dramatically by having all equipment on a portable, pre-piped skid, ready to be set.

### Environmental Solution:

As land permit regulations continue to restrict available space, the QuickSet Skid is the ideal solution. Its compact design allows customers to process the same amount of gas within a smaller footprint.

### High Salvage Value:

Many of the parts on the QuickSet Skid can be reused, adding to its overall value as a complete solution.
