

TRUE. BLUE. RESPONSIVE.

A team of dedicated professionals is committed to your project and objectives.

Valerus's team is comprised of experienced professionals who have spent their careers in the production equipment industry. Their unique combination of field, applications and manufacturing experience ensures that the Valerus team understands your business and how best to optimize your equipment requirements. Produced by experts in every phase of process design and fabrication, our work and products reflect the Valerus commitment to be the best, safest and most responsive company in the industry.

Turnkey services.

Valerus provides complete turnkey services including project management, facility and equipment design, equipment manufacture, onsite construction, installation and start-up. Our highly trained and experienced operations group can operate and maintain all types of production facilities.

Parts and service.

Valerus continues to serve you after the sale. Our service centers provide ancillary equipment, supplies and parts for standard and custom products. To keep your facility and equipment operating at peak efficiency, Valerus maintains an inventory of replacement parts in our facilities located throughout the gas-producing regions. Also, each facility has a team of knowledgeable and highly skilled technicians to provide a quick response when you require repairs and maintenance. When rework is required, it can be completed in the shop or field, as needed.

Oil and Gas Production Systems

Stock Product Line

Valerus's stock production line includes a complete range of surface production equipment. Valerus manufactures a broad range of high-quality, pre-engineered stock production equipment tailored for onshore and offshore applications. We maintain a large inventory of the most requested equipment in stock for immediate shipment. Valerus designs, manufactures and stocks this equipment at our own strategically located facilities. Our stock pressure vessels are designed and manufactured to ASME codes and API standards.

Modified Stock

Valerus offers a modified stock equipment option to our customers. Small modifications to stock equipment, such as changing a nozzle size or using a specific brand of instrumentation, can be handled quickly and cost-effectively.

Separators

- > High and Low Pressure
- > Vertical and Horizontal
- > Two and Three Phase
- > Filter Separators
- > Coalescing Filter Separators
- > Test Separator
- > Freewater Knockout
- > Slug Catcher

Indirect Heaters

- > Water, Oil and Salt Bath
- > 250MBtu/hr to 2.0MMBtu/hr

Heater Treater

- > Horizontal
- > Vertical

Production Units

- > Indirect Heater with Vertical or Horizontal Separator
- > Enclosed or Open Designs
- > Cold Weather Design

Dehydration Units

Absorbers / Contactors

- > Integral Scrubber
- > 6-5/8 to 72" diameter
- > Trayed and Packed Designs

Glycol Regenerators

- > 125MBtu/hr to 3.0MMBtu/hr

Amine Regeneration Systems

- > Standard or Enhanced Treating Designs
- > 20-75 gpm Circulation Rates

Condensate Stabilizers

- > 100BBL/day to 1500BBL/day

Dew Point Control Systems

- > 500Mscfd to 40MMscfd

Flare

- > Electronic
- > Flare Combustor

Tanks

- > Steel and Fiberglass Storage Tanks
- > Sump Tanks

Safety Systems

- > Electronic
- > Pneumatic

Measurement

- > Senior Meter Runs
- > Junior Simplex Runs

Utility Equipment

- > Fuel and Instrumentation Gas Packages
- > Blowcases
- > BTEX Units
- > Gas Inductors

Custom-Fabricated Production Skids

Glymine

Pig Launchers and Receivers

Offshore Packages

- > Fuel Gas Skids

Production Manifolds

Custom Equipment

If conditions require high-spec equipment, Valerus offers custom-engineered equipment and systems built to your specifications. Valerus combines experienced engineering and manufacturing capabilities with a timely turnaround to exceed your high-spec custom requirements. Where it is suitable for certain applications, Valerus also offers pre-engineered custom-spec equipment.
